

Analgesic & Anti-Inflammatory Agents**Name: Acetaminophen****Analgesic & Anti-Inflammatory Agents**

Description: is an analgesic used to temporarily relieve minor aches and pains due to headache, muscular aches, backache, minor pain of arthritis, the common cold, toothache, and premenstrual and menstrual cramps. Acetaminophen is also used to temporarily reduce fever.

Name: Amidopyrine**Analgesic & Anti-Inflammatory Agents**

Description: Aminophenazone (or aminopyrine, amidopyrine, Pyramidon) is a pyrazolone with analgesic, anti-inflammatory, and antipyretic properties but has risk of agranulocytosis. A breath test with ¹³C-labeled aminopyrine has been used as a non-invasive measure of cytochrome P-450 metabolic activity in liver function tests

Name: Analgin**Analgesic & Anti-Inflammatory Agents**

Description: is used to relieve pain, inflammation, and fever. Take it with food or milk to prevent upset stomach. Take it as per the dose and duration prescribed by your doctor. Long term use may lead to serious complications such as stomach bleeding and kidney problems.

Name: Antipyrine**Analgesic & Anti-Inflammatory Agents**

Description: Antipyrine and benzocaine otic is used to relieve ear pain and swelling caused by middle ear infections. It may be used along with antibiotics to treat an ear infection. It is also used to help remove a build up of ear wax in the ear. Antipyrine and benzocaine are in a class of medications called analgesics.

Name: Antipyrine**Analgesic & Anti-Inflammatory Agents**

Description: Antipyrine and benzocaine otic is used to relieve ear pain and swelling caused by middle ear infections. It may be used along with antibiotics to treat an ear infection. It is also used to help remove a build up of ear wax in the ear. Antipyrine and benzocaine are in a class of medications called analgesics.

Name: Beclomethasone Dipropionate**Analgesic & Anti-Inflammatory Agents**

Description: Betamethasone soluble tablets belong to a group of medicines called corticosteroids('steroids'). Steroids work by reducing inflammation, swelling and irritation in your mouth. Betamethasone Soluble tablets used as a mouthwash may help reduce inflammation and pain in your mouth, and speed up the healing process.

Name: Paracetamol**Analgesic & Anti-Inflammatory Agents**

Description: Paracetamol (called paracetamol throughout this leaflet). This medicine contains paracetamol. It belongs to a group of medicines called analgesics (painkillers) and is used to treat pain (including headache, toothache, back and period pain) and cold or flu symptoms.

Name: Phenacetin**Analgesic & Anti-Inflammatory Agents**

Description: Phenacetin was used as an analgesic and fever-reducing drug in both human and veterinary medicine for many years. It was introduced into therapy in 1887 and was extensively used in analgesic mixtures until it was implicated in kidney disease (nephropathy) due to abuse of analgesics.

Name: Bithionol sulfoxid**Analgesic & Anti-Inflammatory Agents**

Description: Bithionol sulfoxide is an active anthelmintic for the treatment of fascioliosis and paramphistomosis, and has good activity against adult Oesophagostomum and some cestodes (Thysaniezia, Moniezia) in cattle, sheep, goats, cats, dogs and poultry animals. It also acts as an intestinal disinfectant.

Name: Buprenorphine HCl
Analgesic & Anti-Inflammatory Agents

Description: Buprenorphine is used to treat dependence/addiction to opioids. Buprenorphine belongs to a class of drugs called mixed opioid agonist-antagonists. It helps prevent withdrawal symptoms caused by stopping other opioids.

Name: Butorphanol Tartrate
Analgesic & Anti-Inflammatory Agents

Description: This medication is used to treat moderate to severe pain, including pain from surgery, muscle pain, and migraine headaches. Butorphanol is an opioid pain reliever similar to morphine. It acts on certain centers in the brain to give you pain relief.

Name: Dexamethasone & Sodium Phosphate
Analgesic & Anti-Inflammatory Agents

Description: It is used specifically to decrease swelling (edema), associated with tumors of the spine and brain, and to treat eye inflammation. To treat or prevent allergic reactions. As treatment of certain kinds of autoimmune diseases, skin conditions, asthma and other lung conditions.

Name: Phenazone
Analgesic & Anti-Inflammatory Agents

Description: Phenazone, known in the U.S. as antipyrine, is a pain reliever, and a fever reducer. It is combined in ear drops (otic drops) with benzocaine, a medication used to numb the ear. It is used to relieve ear pain caused by infections, and remove a build up of ear wax

Name: Quinine HCl/Sulphate
Analgesic & Anti-Inflammatory Agents

Description: This medication is used alone or with other medication to treat malaria caused by mosquito bites in countries where malaria is common. Malaria parasites can enter the body through these mosquito bites, and then live in body tissues such as red blood cells or the liver.

Name: Dipyrrone
Analgesic & Anti-Inflammatory Agents

Description: Dipyrrone (metamizole) is a nonsteroidal anti-inflammatory drug used in some countries to treat pain (postoperative, colic, cancer, and migraine); it is banned in other countries because of an association with life-threatening blood disorders

Name: Fluticasone Propionate
Analgesic & Anti-Inflammatory Agents

Description: Fluticasone is used to relieve seasonal and year-round allergic and non-allergic nasal symptoms, such as stuffy/runny nose, itching, and sneezing. It can also help relieve allergy eye symptoms such as itchy, watery eyes. This medication belongs to a class of drugs known as corticosteroids.

Name: Hydroxychloroquine Sulfate
Analgesic & Anti-Inflammatory Agents

Description: Hydroxychloroquine treats rheumatic disorders such as systemic lupus erythematosus, rheumatoid arthritis, and porphyria cutanea tarda, and certain infections such as Q fever and certain types of malaria. It is considered the first-line treatment for systemic lupus erythematosus.

Name: Leflunomide
Analgesic & Anti-Inflammatory Agents

Description: This medication is used to treat rheumatoid arthritis, a condition in which the body's defense system (immune system) fails to recognize the body as itself and attacks the healthy tissues around the joints. Leflunomide helps to reduce the joint damage/pain/swelling and helps you to move better.

Name: Metamizole
Analgesic & Anti-Inflammatory Agents

Description: Dipyrrone (metamizole) is a nonsteroidal anti-inflammatory drug used in some countries to treat pain (postoperative, colic, cancer, and migraine); it is banned in other countries because of an association with life-threatening blood disorders

Name: Tramadol HCl
Analgesic & Anti-Inflammatory Agents

Description: Tramadol is a narcotic-like pain reliever. Tramadol is used to treat moderate to severe pain in adults. The extended-release form of tramadol is for around-the-clock treatment of pain. The extended-release form of tramadol is not for use on an as-needed basis for pain.

Anti-Infective & Antiprotozoal Medications
Name: Amodiaquine base
Anti-Infective & Antiprotozoal Medications

Description: Amodiaquine remains a useful agent for treating falciparum malaria, but because of its potential for causing hepatotoxicity, it is no longer used for antimalarial prophylaxis. Amodiaquine is available in tablets of 150 to 600 mg in generic forms and under the brand names Camoquin and Flavoquine.

Name: Amodiaquine HCl
Anti-Infective & Antiprotozoal Medications

Description: Amodiaquine (ADQ) is a medication used to treat malaria, including Plasmodium falciparum malaria when uncomplicated. It is recommended to be given with artesunate to reduce the risk of resistance. Due to the risk of rare but serious side effects, it is not generally recommended to prevent malaria.

Name: Amoxicillin Trihydrate
Anti-Infective & Antiprotozoal Medications

Description: amoxicillin. Amoxicillin is a penicillin antibiotic that is used to treat many different types of infection caused by bacteria, such as tonsillitis, bronchitis, pneumonia, and infections of the ear, nose, throat, skin, or urinary tract.

Name: Amoxicillin Sodium
Anti-Infective & Antiprotozoal Medications

Description: Amoxicillin is used in the treatment of a number of infections, including acute otitis media, streptococcal pharyngitis, pneumonia, skin infections, urinary tract infections, Salmonella infections, Lyme disease, and chlamydia infections.

Name: Amoxicillin Trihydrate
Anti-Infective & Antiprotozoal Medications

Description: Amoxicillin is a penicillin antibiotic that is used to treat many different types of infection caused by bacteria, such as tonsillitis, bronchitis, pneumonia, and infections of the ear, nose, throat, skin, or urinary tract.

Name: Ampicillin Anhydrous
Anti-Infective & Antiprotozoal Medications

Description: Ampicillin is a penicillin antibiotic that is used to treat or prevent many different types of infections such as bladder infections, pneumonia, gonorrhea, meningitis, or infections of the stomach or intestines. Ampicillin may also be used for purposes not listed in this medication guide.

Name: Ampicillin Sodium
Anti-Infective & Antiprotozoal Medications

Description: Ampicillin is used to treat a wide variety of bacterial infections. It is a penicillin-type antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.

Name: Cefuroxime
Anti-Infective & Antiprotozoal Medications

Description: Cefuroxime is used to treat a wide variety of bacterial infections. This medication is known as a cephalosporin antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.

Name: Cephalexin Monohydrate
Anti-Infective & Antiprotozoal Medications

Description: Cephalexin is a cephalosporin (SEF a low spor in) antibiotic. It works by fighting bacteria in your body. Cephalexin is used to treat infections caused by bacteria, including upper respiratory infections, ear infections, skin infections, urinary tract infections and bone infections.

Name: Chloramphenicol Levogyr
Anti-Infective & Antiprotozoal Medications

Description: Chloramphenicol is an antibiotic. It's mainly used to treat eye infections (such as conjunctivitis) and sometimes ear infections. Chloramphenicol comes as eye drops or eye ointment.

Name: Chloramphenicol Sodium Succinate
Anti-Infective & Antiprotozoal Medications

Description: Chloramphenicol is used to treat serious infections in different parts of the body. It is sometimes given with other antibiotics. However, chloramphenicol should not be used for colds, flu, other virus infections, sore throats or other minor infections, or to prevent infections

Name: Ciprofloxacin base/HCl
Anti-Infective & Antiprotozoal Medications

Description: To reduce the development of drug-resistant bacteria and maintain the effectiveness of Ciprofloxacin Tablets USP and other antibacterial drugs, Ciprofloxacin Tablets USP should be used only to treat or prevent infections that are proven or strongly suspected to be caused by bacteria

Name: Clarithromycin
Anti-Infective & Antiprotozoal Medications

Description: Clarithromycin is an antibiotic. It's used to treat chest infections, such as pneumonia, skin problems such as cellulitis, and ear infections. It's also used to get rid of *Helicobacter pylori*, a bacteria that can cause stomach ulcers.

Name: Clindamycin HCl/Phosphate
Anti-Infective & Antiprotozoal Medications

Description: Clindamycin is used to treat a wide variety of bacterial infections. It is an antibiotic that works by stopping the growth of bacteria. This antibiotic treats only bacterial infections. It will not work for virus infections (such as common cold, flu).

Name: Clotrimazole
Anti-Infective & Antiprotozoal Medications

Description: This medication is used to treat vaginal yeast infections. Clotrimazole reduces vaginal burning, itching, and discharge that may occur with this condition. This medication is an azole antifungal. It works by stopping the growth of yeast (fungus) that causes the infection.

Name: Gatifloxacin
Anti-Infective & Antiprotozoal Medications

Description: Gatifloxacin is an antibiotic in a group of drugs called fluoroquinolones. It fights bacteria in the body. Gatifloxacin is used to treat bacterial infections of the lungs, sinuses, skin, and urinary tract. It is also used to treat certain sexually transmitted diseases.

Name: Ampicillin
Anti-Infective & Antiprotozoal Medications

Description: Ampicillin is used to treat a wide variety of bacterial infections. It is a penicillin-type antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections

Name: Arteether.
Anti-Infective & Antiprotozoal Medications

Description: Arteether is used for the treatment of severe falciparum malaria active against *P. falciparum* strains that are resistant to chloroquine, mefloquine, halofantrine, quinine, pyrimethamine, cycloguanil and amodiaquine.

Name: Artemether
Anti-Infective & Antiprotozoal Medications

Description: is used to treat certain kinds of malaria infections (a serious infection that is spread by mosquitoes in certain parts of the world and can cause death). Artemether and lumefantrine should not be used to prevent malaria.

Name: Artesunate (sterile)	Anti-Infective & Antiprotozoal Medications
Description: is a medication used to treat malaria. The intravenous form is preferred to quinine for severe malaria. Often it is used as part of combination therapy, such as artesunate plus mefloquine. It is not used for the prevention of malaria.	
Name: Azithromycin base/dihydrate	Anti-Infective & Antiprotozoal Medications
Description: Azithromycin is used to treat a wide variety of bacterial infections. It is a macrolide-type antibiotic. It works by stopping the growth of bacteria. This medication will not work for viral infections (such as common cold, flu).	
Name: Cefadroxil monohydrate	Anti-Infective & Antiprotozoal Medications
Description: Cefadroxil is used to treat certain infections caused by bacteria such as infections of the skin, throat, tonsils, and urinary tract. Cefadroxil is in a class of medications called cephalosporin antibiotics. It works by killing bacteria.	
Name: Cefazolin	Anti-Infective & Antiprotozoal Medications
Description: Cefazolin is an antibiotic used to treat a wide variety of bacterial infections. It may also be used before and during certain surgeries to help prevent infection. This medication is known as a cephalosporin antibiotic. It works by stopping the growth of bacteria.	
Name: Cloxacillin Sodium	Anti-Infective & Antiprotozoal Medications
Description: Cloxacillin is used to treat a wide variety of bacterial infections. This medication is a type of penicillin antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.	
Name: Cloxacillin Sodium sterile	Anti-Infective & Antiprotozoal Medications
Description: Cloxacillin is used to treat a wide variety of bacterial infections. This medication is a type of penicillin antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.	
Name: Colistin Sulfate	Anti-Infective & Antiprotozoal Medications
Description: Colistin, also known as polymyxin E, is an antibiotic used as a last-resort for multidrug-resistant Gram negative infections including pneumonia. These may involve bacteria such as <i>Pseudomonas aeruginosa</i> , <i>Klebsiella pneumoniae</i> , or <i>Acinetobacter</i> .	
Name: Dicloxacillin Sodium	Anti-Infective & Antiprotozoal Medications
Description:	
Name: Dihydrostreptomycin Sulfate	Anti-Infective & Antiprotozoal Medications
Description: Dicloxacillin is used to treat a wide variety of bacterial infections. It is a penicillin-type antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.	
Name: Dijodohydroxyquinoline	Anti-Infective & Antiprotozoal Medications
Description:	
Name: Dimetridazol	Anti-Infective & Antiprotozoal Medications
Description: It is considered the drug of choice for treating asymptomatic or moderate forms of amebiasis. The full mechanism of action is unknown. Iodoquinol is used for diseases caused by moderate intestinal amebiasis.	
Name: Metronidazole	Anti-Infective & Antiprotozoal Medications

Description: Metronidazole is an antibiotic that is used to treat a wide variety of infections. It works by stopping the growth of certain bacteria and parasites. ... Metronidazole may also be used with other medications to treat certain stomach/intestinal ulcers caused by a bacteria (H. pylori)

Name: Dirithromycin

Anti-Infective & Antiprotozoal Medications

Description: Dirithromycin is a macrolide glycopeptide antibiotic used to treat many different types of bacterial infections, such as bronchitis, pneumonia, tonsillitis, and even skin infections

Name: Doxycycline Hydrochloride

Anti-Infective & Antiprotozoal Medications

Description: Doxycycline is a tetracycline antibiotic that fights bacteria in the body. Doxycycline is used to treat many different bacterial infections, such as acne, urinary tract infections, intestinal infections, respiratory infections, eye infections, gonorrhea, chlamydia, syphilis, periodontitis (gum disease), and others

Name: Gentamycine Sulfate

Anti-Infective & Antiprotozoal Medications

Description: This medication is used to prevent or treat a wide variety of bacterial infections. Gentamicin belongs to a class of drugs known as aminoglycoside antibiotics. It works by stopping the growth of bacteria.

Name: Cefepime HCl

Anti-Infective & Antiprotozoal Medications

Description: Cefepime injection is used to treat certain infections caused by bacteria including pneumonia, and skin, urinary tract, and kidney infections. Cefepime injection is used in combination with metronidazole (Flagyl) to treat abdominal (stomach area) infections

Name: Cefixime Trihydrate

Anti-Infective & Antiprotozoal Medications

Description: Cefixime is used to treat certain infections caused by bacteria such as bronchitis (infection of the airway tubes leading to the lungs); gonorrhea (a sexually transmitted disease); and infections of the ears, throat, tonsils, and urinary tract. Cefixime is in a class of medications called cephalosporin antibiotics

Name: Cefoperazone Sodium

Anti-Infective & Antiprotozoal Medications

Description: Enterococcal Infections: Although cefoperazone has been shown to be clinically effective in the treatment of infections caused by enterococci in cases of peritonitis and other intra-abdominal infections, infections of the skin and skin structures, pelvic inflammatory disease, endometritis and other infections

Name: Cefotaxime Sodium, sterile

Anti-Infective & Antiprotozoal Medications

Description: Cefotaxime is used to treat a wide variety of bacterial infections. It may also be used to prevent infection from certain surgeries. This medication belongs to a class of drugs known as cephalosporin antibiotics. It works by stopping the growth of bacteria.

Name: Ceftazidime

Anti-Infective & Antiprotozoal Medications

Description: Ceftazidime injection is used to treat certain infections caused by bacteria including pneumonia and other lower respiratory tract (lung) infections; meningitis (infection of the membranes that surround the brain and spinal cord) and other brain and spinal cord infections; and abdominal (stomach area), skin, blood

Name: Ceftazidime Pentahydrate, sterile

Anti-Infective & Antiprotozoal Medications

Description: Ceftazidime injection is used to treat certain infections caused by bacteria including pneumonia and other lower respiratory tract (lung) infections; meningitis (infection of the membranes that surround the brain and spinal cord) and other brain and spinal cord infections; and abdominal (stomach area), skin, blood,

Name: Ceftriaxone Sodium, sterile

Anti-Infective & Antiprotozoal Medications

Description: Ceftriaxone (ceftriaxone sodium and dextrose) Injection is an antibacterial drug used to treat conditions such as lower respiratory tract infections, skin and skin structure infections, urinary tract infections, pelvic inflammatory disease, bacterial septicemia, bone and joint infections, and meningitis.

Name: Cefuroxime Axetil
Anti-Infective & Antiprotozoal Medications

Description: Cefuroxime is used to treat a wide variety of bacterial infections. This medication is known as a cephalosporin antibiotic. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections.

Name: Doxycyclin HCl/monohydrate
Anti-Infective & Antiprotozoal Medications

Description: It is used in treating a wide variety of infections including respiratory tract infection including pneumonia and chronic bronchitis, pelvic inflammatory disease, urinary tract infection, syphilis, chlamydia, mycoplasma, cholera, malaria, and other diseases.

Name: Emetine Hydrochloride
Anti-Infective & Antiprotozoal Medications

Description: Emetine is a drug used as both an anti-protozoal and to induce vomiting. It is produced from the ipecac root. It takes its name from its emetic properties.

Name: Enrofloxacin Base & HCl
Anti-Infective & Antiprotozoal Medications

Description: Enrofloxacin works by inhibiting the process of DNA synthesis within the bacterial cells, which results in cell death. This drug is commonly used to treat a range of bacterial infections, including those of the skin, urinary tract, and respiratory system, as well as infections that result from wounds.

Name: Ethambutol HCl (2 HCl)
Anti-Infective & Antiprotozoal Medications

Description: Ethambutol is used with other medications to treat tuberculosis (TB). Ethambutol is an antibiotic and works by stopping the growth of bacteria. This antibiotic treats only bacterial infections. It will not work for viral infections (such as common cold, flu).

Name: Ethionamide
Anti-Infective & Antiprotozoal Medications

Description: Ethionamide is used with other medications to treat tuberculosis (TB). Ethionamide is an antibiotic and works by stopping the growth of bacteria. This antibiotic treats only bacterial infections. It will not work for viral infections (such as common cold, flu).

Name: Flucloxacillin Sodium
Anti-Infective & Antiprotozoal Medications

Description: Flucloxacillin is used to treat infections caused by bacteria, such as: Skin and soft tissue infections, such as abscesses, boils, cellulitis, impetigo, or infected ulcers, eczema, wounds or burns. Chest infections, such as pneumonia, lung abscess.

Name: Flumequine
Anti-Infective & Antiprotozoal Medications

Description: Flumequine is a synthetic fluoroquinolone antibiotic used to treat bacterial infections. It is a first-generation fluoroquinolone antibacterial that has been removed from clinical use and is no longer being marketed.

Name: Fosfomycin Tromethamine
Anti-Infective & Antiprotozoal Medications

Description: This medication is an antibiotic used to treat bladder infections (such as acute cystitis or lower urinary tract infections) in women. It works by stopping the growth of bacteria. This antibiotic treats only bacterial infections. It will not work for viral infections (such as common cold, flu).

Name: Furazolidone
Anti-Infective & Antiprotozoal Medications

Description: This medication is used in the treatment of diarrhea or enteritis caused by bacteria. It may also be useful in treating traveler's diarrhea, typhoid fever, cholera and salmonella infections. HOW TO USE: Take this medication by mouth as directed usually four times a day.

Name: Griseofulvin
Anti-Infective & Antiprotozoal Medications

Description: Griseofulvin is used to treat infections such as ringworm, athlete's foot, jock itch, and fungal infections of the scalp, fingernails, or toenails. Griseofulvin may also be used for purposes not listed in this medication guide. You should not use griseofulvin if you have porphyria or liver failure

Antiparasitics

Name: dl-Tetramisol HCl

Antiparasitics

Description: Tetramisol Indication: For adjuvant treatment in combination with fluorouracil after surgical resection in patients with Dukes' stage C colon cancer. Also used to treat malignant melanoma and head/neck cancer.

Name: Febantel

Antiparasitics

Description: Febantel. General Description: Praziquantel + pyrantel pamoate + febantel is an oral anthelmintic (dewormer) to kill tapeworms, roundworms, hookworms and whipworms in your dog. Tablets may be given directly by mouth or offered in a small amount of food.

Name: Fenbendazole

Antiparasitics

Description: Fenbendazole seems to be well tolerated in humans after oral exposure (single oral dose up to 2,000 mg/per person; 500 mg/per person for 10 consecutive days); however observations in humans are limited. Fenbendazole is of low acute toxicity after oral exposure. No acute exposure limit is available.

Name: Ivermectin

Antiparasitics

Description: Ivermectin is a medication used to treat many types of parasite infestations. This includes head lice, scabies, river blindness (onchocerciasis), strongyloidiasis, trichuriasis, ascariasis, and lymphatic filariasis. It can be taken by mouth or applied to the skin for external infestations.

Name: Pyrantel Tartrate

Antiparasitics

Description: Pyrantel tartrate is indicated (labeled) for the removal or prevention of the following parasites in swine: large roundworms (*Ascaris suum*) and *Oesophagostomum* spp.. The drug also has activity against the swine stomach worm (*Hyostrogylus rubidus*). Although not approved, pyrantel has been used in pet birds and llamas.

Name: Levamisol HCl

Antiparasitics

Description: trade name Ergamisol among others, is a medication used to treat parasitic worm infections. Specifically it is used for ascariasis and hookworm infections. It is taken by mouth. Side effects may include abdominal pain, vomiting, headache, and dizziness.

Name: Mebendazole

Antiparasitics

Description: Mebendazole is used to treat intestinal worm infections such as pinworm, roundworm, and hookworm.

Name: Morantel Citrate

Antiparasitics

Description: Morantel bolus / Tablet. DESCRIPTION: Morantel bolus is a broad-spectrum anthelmintic, active against infections with gastrointestinal roundworm (including the larval stages of *Ostertagia ostertagi*), lungworms and tapeworms in sheep and goats. Albendazole is also active against adult liver fluke.

Name: Morantel Tartrate

Antiparasitics

Description: Morantel is an anthelmintic drug used for the removal of parasitic worms in livestock. It affects the nervous system of worms given the drug is an inhibitor of acetylcholinesterase.

Name: Triclabendazole

Antiparasitics

Description: Triclabendazole is used to treat fascioliasis (an infection, usually in the liver and bile ducts, caused by flat worms [liver flukes]) in adults and children 6 years of age and older. Triclabendazole is in a class of medications called anthelmintics. It works by killing the flat worms

Name: Praziquantel
Antiparasitics

Description: Praziquantel is a prescription drug used as anti-worm medication. It prevents newly hatched insect larvae (worms) from growing or multiplying in your body. Praziquantel is used to treat infections caused by Schistosoma worms, which enter the body through skin that has come into contact with contaminated water.

Name: Pyrantel Pamoate
Antiparasitics

Description: This medication is used to treat intestinal worm infections such as pinworm, roundworm, and hookworm. Pyrantel belongs to a class of drugs known as anthelmintics. It works by making the worms unable to move (paralyzed) so that the body can remove them naturally in the stool.

Antiseptics & Desinfectants
Name: Benzethonium Chloride
Antiseptics & Desinfectants

Description: Benzethonium chloride topical (for the skin) is used to treat minor cuts, scrapes, wounds, or cracked skin. This medicine dries to form a waterproof protective seal over the skin. Benzethonium chloride topical may also be used for purposes not listed in this medication guide.

Name: Cetrimide
Antiseptics & Desinfectants

Description: Cetrimide is an antiseptic which is a mixture of different quaternary ammonium salts including cetrimonium bromide (CTAB). It was first discovered and developed by ICI and introduced under the brand name Cetavlon. It is used as a 1-3 % solution for cleaning roadside accident wounds.

Name: Chlorhexidine Base, Diacetate
Antiseptics & Desinfectants

Description: These wipes will clean your skin before surgery and help prevent infection at the surgical site. The wipes contain an anti-septic called Chlorhexidine Gluconate (CHG). CHG kills bacteria on skin that could cause a wound infection

Name: Bupropion HCl
Antiseptics & Desinfectants

Description: Bupropion is an antidepressant medication used to treat major depressive disorder and seasonal affective disorder. The Zyban brand of bupropion is used to help people stop smoking by reducing cravings and other withdrawal effects

Name: Carbamazepine
Antiseptics & Desinfectants

Description: Carbamazepine is a medicine used to treat epilepsy. It can also be taken for nerve pain caused by diabetes (peripheral neuropathy) or if you have a painful condition of the face called trigeminal neuralgia. Carbamazepine is occasionally used to treat bipolar disorder when other medicines haven't worked.

Name: Chlordiazepoxide Base/ HCl
Antiseptics & Desinfectants

Description: Chlordiazepoxide is used to treat anxiety and acute alcohol withdrawal. It is also used to relieve fear and anxiety before surgery. This medication belongs to a class of drugs called benzodiazepines which act on the brain and nerves (central nervous system) to produce a calming effect.

Name: Oxazepam
Antiseptics & Desinfectants

Description: Oxazepam is used to treat anxiety and also acute alcohol withdrawal. This medication belongs to a class of drugs called benzodiazepines which act on the brain and nerves (central nervous system) to produce a calming and an anti-seizure effect

Name: Paroxetine HCl Hemihydrate
Antiseptics & Desinfectants

Description: Paroxetine is used to treat depression, panic attacks, obsessive-compulsive disorder (OCD), anxiety disorders, and post-traumatic stress disorder. It works by helping to restore the balance of a certain natural substance (serotonin) in the brain.

Name: Phenobarbitone
Antiseptics & Desinfectants

Description: Phenobarbital belongs to the class of medications called barbiturates. It is used to treat insomnia (difficulty sleeping) and as a sedative to relieve the symptoms of anxiety or tension. It is also used for the control of certain types of seizures. It works by slowing down the brain and nervous system.

Name: Zolpidem Tartrate
Antiseptics & Desinfectants

Description: Zolpidem is used to treat a certain sleep problem (insomnia) in adults. It helps you fall asleep faster and stay asleep longer, so you can get a better night's sleep. It may also reduce the number of times you wake up during the night. Zolpidem belongs to a class of drugs called sedative-hypnotics

Name: Benzalkonium Chloride
Antiseptics & Desinfectants

Description: Benzalkonium chloride is quaternary ammonium compound used in the pharmaceutical industry as an antimicrobial preservative, antiseptic, disinfectant, solubilizing agent, and wetting agent

Name: Chlorhexidine Digluconate, DiHCl
Antiseptics & Desinfectants

Description: Chlorhexidine gluconate oral rinse is used to treat gingivitis (swelling, redness, bleeding gums). Chlorhexidine gluconate is usually prescribed by a dentist. Chlorhexidine gluconate oral rinse is not for treating all types of gingivitis. Use the medication only to treat the condition your dentist prescribed it for.

Name: Dequalinium Chloride
Antiseptics & Desinfectants

Description: Dequalinium chloride is the active ingredient of several medications: Dequadin an antiseptic and disinfectant. It is a topical bacteriostat. It is used in wound dressings and mouth infections and may also have antifungal action

Name: Citalopram Hydrobromide
Antiseptics & Desinfectants

Description: Citalopram is used to treat depression. It may improve your energy level and feelings of well-being. Citalopram is known as a selective serotonin reuptake inhibitor (SSRI). This medication works by helping to restore the balance of a certain natural substance (serotonin) in the brain.

Name: Clonazepam Diazepam
Antiseptics & Desinfectants

Description: Klonopin (clonazepam) and Valium (diazepam) are benzodiazepine class anti-anxiety medications used to treat anxiety, and to treat and/or prevent certain types of seizures. Klonopin is also used to treat panic disorder and Lennox-Gastaut syndrome

Name: Fluoxetine HCl
Antiseptics & Desinfectants

Description: Fluoxetine is used to treat depression, panic attacks, obsessive compulsive disorder, a certain eating disorder (bulimia), and a severe form of premenstrual syndrome (premenstrual dysphoric disorder)

Name: Primidone
Antiseptics & Desinfectants

Description: Primidone is the generic form of the brand-name drug Mysoline, which is used to treat and prevent seizures. The medicine can be used alone or combined with other treatments. It's also used to treat essential tremor and other neurological conditions. Primidone is in a class of drugs known as anticonvulsants

Name: Prochlorperazin Maleate	Antiseptics & Desinfectants
Description: This medication is used to treat severe nausea and vomiting from certain causes (for example, after surgery or cancer treatment). Prochlorperazine belongs to a class of drugs known as phenothiazines.	
Name: Propofol	Antiseptics & Desinfectants
Description: Propofol is an intravenous (IV) sedative-hypnotic agent that can be used for initiation and maintenance of Monitored Anesthesia Care (MAC) sedation, combined sedation and regional anesthesia, induction of general anesthesia, maintenance of general anesthesia, and intensive care unit (ICU) sedation of intubated	
Name: Thymol	Antiseptics & Desinfectants
Description: Thymol has been used in alcohol solutions and in dusting powders for the treatment of tinea or ringworm infections, and was used in the United States to treat hookworm infections.	
Name: Triclosan	Antiseptics & Desinfectants
Description: Triclosan (sometimes abbreviated as TCS) is an antibacterial and antifungal agent present in some consumer products, including toothpaste, soaps, detergents, toys, and surgical cleaning treatments. It is similar in its uses and mechanism of action to triclocarban.	
Name: Meprobamate	Antiseptics & Desinfectants
Description: Meprobamate is used to treat anxiety disorders or for short-term relief of the symptoms of anxiety in adults and children 6 years of age and older. Meprobamate is in a class of medications called tranquilizers. It works by slowing activity in the brain to allow for relaxation	
Name: Midazolam Base/HCl	Antiseptics & Desinfectants
Description: Midazolam Hydrochloride Syrup is a benzodiazepine used in pediatric patients for sedation, to reduce anxiety, and to produce amnesia prior to diagnostic, therapeutic or endoscopic procedures or before induction of anesthesia.	
Name: Mirtazapine	Antiseptics & Desinfectants
Description: Mirtazapine is an antidepressant medicine. It's used to treat depression and sometimes obsessive compulsive disorder and anxiety disorders. Mirtazapine is available only on prescription. It comes as tablets or as a liquid	
Name: Nitrazepam	Antiseptics & Desinfectants
Description: Nitrazepam belongs to the class of medications called benzodiazepines. It is used for short-term treatment of sleeping problems (insomnia), such as difficulty falling asleep, frequent awakenings during the night, and early-morning awakening. It is also used to manage myoclonic seizures.	
Name: Setraline HCl	Antiseptics & Desinfectants
Description: Sertraline is used to treat depression, panic attacks, obsessive compulsive disorder, post-traumatic stress disorder, social anxiety disorder (social phobia), and a severe form of premenstrual syndrome (premenstrual dysphoric disorder).	
Name: Sulpiride	Antiseptics & Desinfectants
Description: Sulpiride, sold under the brand name Dogmatil among others, is an atypical antipsychotic (although some texts have referred to it as a typical antipsychotic) medication of the benzamide class which is used mainly in the treatment of psychosis associated with schizophrenia and major depressive disorder, and sometimes	

Name: Venlafaxine HCl
Antiseptics & Desinfectants

Description: Venlafaxine is an antidepressant belonging to a group of drugs called selective serotonin and norepinephrine reuptake inhibitors (SSNRIs). Venlafaxine affects chemicals in the brain that may be unbalanced in people with depression. Venlafaxine is used to treat major depressive disorder, anxiety and panic disorder

Insecticides & Repellents
Name: Benzylbenzoate
Antiseptics & Desinfectants

Description: Medical. Benzyl benzoate is an effective and inexpensive topical treatment for human scabies. It has vasodilating and spasmolytic effects and is present in many asthma and whooping cough drugs. It is also used as an excipient in some testosterone-replacement medications (like Nebido) for treating hypogonadism.

Name: Cypermethrin
Antiseptics & Desinfectants

Description: Cypermethrin is a synthetic pyrethroid insecticide used to kill insects on cotton and lettuce, and to kill cockroaches, fleas, and termites in houses and other buildings. Cypermethrin is toxic to the nervous system. Symptoms of exposure include dizziness, nausea, headaches, and seizures.

Name: Diethyltoluamide
Antiseptics & Desinfectants

Description: Infestations by insects or other arthropods (prophylaxis)—Diethyltoluamide is an insect repellent indicated for the topical prevention of infections transmitted by bites of insects or infestations by insects or other arthropods.

Name: Permethrin
Antiseptics & Desinfectants

Description: This medication is used to treat scabies, a condition caused by tiny insects called mites that infest and irritate your skin. Permethrin belongs to a class of drugs known as pyrethrins. Permethrin works by paralyzing and killing the mites and their eggs.

Name: Piperonylbutoxide
Antiseptics & Desinfectants

Description: Piperonyl butoxide (PBO) is a waxy white solid organic compound used as a synergist component of pesticide formulations. That is, despite having no pesticidal activity of its own, it enhances the potency of certain pesticides such as carbamates, pyrethrins, pyrethroids, and rotenone.

Metabolic agents
Name: Acarbose
Metabolic agents

Description: . Acarbose is used with a proper diet and exercise program to control high blood sugar in people with type 2 diabetes. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Antazoline HCl
Metabolic agents

Description: Antazoline. Antazoline is a 1st generation antihistamine with anticholinergic properties used to relieve nasal congestion and in eye drops, usually in combination with naphazoline, to relieve the symptoms of allergic conjunctivitis.

Name: Bendroflumethiazide
Metabolic agents

Description: Bendroflumethiazide is a type of medicine called a diuretic. It's used to treat high blood pressure (hypertension) and the build-up of fluid in your body (oedema). Diuretics are sometimes called 'water pills' because they make you pee more. This helps get rid of extra fluid in your body.

Name: Brompheniramine Maleate
Metabolic agents

Description: brompheniramine? Brompheniramine is an antihistamine that is used to treat sneezing, runny nose, and itchy or watery eyes caused by allergies, hay fever, and the common cold. Brompheniramine may also be used for purposes not listed in this medication guid

Name: Buclizine
Metabolic agents

Description: Buclizine is a piperazine-derivative antihistamine used as an antivertigo/antiemetic agent. Buclizine is used in the prevention and treatment of nausea, vomiting, and dizziness associated with motion sickness. Additionally, it has been used in the management of vertigo in diseases affecting the vestibular apparatus

Name: Caffeine Anhydrous
Metabolic agents

Description: Caffeine is a nervous system stimulant that clears drowsiness and gives you an energy boost. Caffeine is such an effective stimulant that many people are using a highly concentrated caffeine powder, or caffeine anhydrous, to stimulate athletic performance or weight loss.

Name: Captopril
Metabolic agents

Description: Captopril is used to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. It is also used to treat heart failure, protect the kidneys from harm due to diabetes, and to improve survival after a heart attack.

Name: Cetirizine Base/DiHCl
Metabolic agents

Description: Cetirizine is an antihistamine used to relieve allergy symptoms such as watery eyes, runny nose, itching eyes/nose, sneezing, hives, and itching. It works by blocking a certain natural substance (histamine) that your body makes during an allergic reaction.

Name: Dex-Bromphenirmaine Maleate
Metabolic agents

Description: is an antihistamine agent that is used for the treatment of allergic conditions, such as hay fever or urticaria

Name: Dimenhydrinate
Metabolic agents

Description: Dimenhydrinate is used to prevent and treat nausea, vomiting, and dizziness caused by motion sickness. Dimenhydrinate is in a class of medications called antihistamines. It works by preventing problems with body balance.

Name: Diphenhydramine HCl
Metabolic agents

Description: Diphenhydramine is an antihistamine used to relieve symptoms of allergy, hay fever, and the common cold. These symptoms include rash, itching, watery eyes, itchy eyes/nose/throat, cough, runny nose, and sneezing. It is also used to prevent and treat nausea, vomiting and dizziness caused by motion sickness

Name: Domperidone Base/Maleate
Metabolic agents

Description: Domperidone is a medicine that increases the movements or contractions of the stomach and bowel. Domperidone is also used to treat nausea and vomiting caused by other drugs used to treat Parkinson's Disease.

Name: Ebastine
Metabolic agents

Description: is an antihistamine medicine. It is used to treat hay fever (perennial or seasonal allergic rhinitis), idiopathic chronic urticaria (hives) and atopic dermatitis (a type of eczema). In addition to this it is used for asthma and certain autoimmune diseases also.

Name: Famotidine
Metabolic agents

Description: Famotidine belongs to a class of drugs known as H2 blockers. This medication is also available without a prescription. It is used to prevent and treat heartburn and other symptoms caused by too much acid in the stomach (acid indigestion).

Name: Fexofenadine HCl
Metabolic agents

Description: Fexofenadine is an antihistamine used to relieve allergy symptoms such as watery eyes, runny nose, itching eyes/nose, sneezing, hives, and itching. It works by blocking a certain natural substance (histamine) that your body makes during an allergic reaction.

Name: Loperamide HCl
Metabolic agents

Description: This medication is used to treat sudden diarrhea (including traveler's diarrhea). It works by slowing down the movement of the gut. This decreases the number of bowel movements and makes the stool less watery. Loperamide is also used to reduce the amount of discharge in patients who have had an ileostomy.

Name: Loratadine
Metabolic agents

Description: Loratadine is used to temporarily relieve the symptoms of hay fever (allergy to pollen, dust, or other substances in the air) and other allergies. These symptoms include sneezing, runny nose, and itchy eyes, nose, or throat. Loratadine is also used to treat itching and redness caused by hives.

Name: Lovastatin
Metabolic agents

Description: Lovastatin, sold under the brand name Mevacor among others, is a statin medication, to treat high blood cholesterol and reduce the risk of cardiovascular disease. Its use is recommended together with lifestyle changes.

Name: Mepyramine Maleate
Metabolic agents

Description: It is used in over-the-counter combination products to treat the common cold and menstrual symptoms. It is also the active ingredient of the topical antihistamine creams Anthisan and Neoantergan sold for the treatment of insect bites, stings, and nettle rash.

Name: Metformin HCl
Metabolic agents

Description: Metformin is used with a proper diet and exercise program and possibly with other medications to control high blood sugar. It is used in patients with type 2 diabetes. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Metoclopramide Base/HCl/DiHCl
Metabolic agents

Description: Metoclopramide is an anti-sickness medicine (known as an antiemetic). It's used to help stop you feeling or being sick (nausea or vomiting) including: after radiotherapy or chemotherapy (treatment for cancer) sickness you may get with a migraine.

Name: Nateglinide
Metabolic agents

Description: Uses. Nateglinide is used alone or with other medications to control high blood sugar along with a proper diet and exercise program. It is used in people with type 2 diabetes. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Nizatidine
Metabolic agents

Description: Nizatidine is used to treat ulcers in the stomach and intestines. Nizatidine also treats heartburn and erosive esophagitis caused by gastroesophageal reflux disease (GERD), a condition in which acid backs up from the stomach into the esophagus.

Name: Chlorthalidone	Metabolic agents
Description: Chlorthalidone is used to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. It is also used to reduce extra salt and water in the body caused by conditions such as heart failure, liver disease, and kidney disease.	
Name: Cinnarizine	Metabolic agents
Description: Cinnarizine is used for the control of vestibular disorders such as vertigo, tinnitus, nausea and vomiting such as that seen in Meniere's disease. Cinnarizine is also effective in the control of motion sickness.	
Name: Cyclizine HCl	Metabolic agents
Description: Cyclizine Hydrochloride Tablets contain the active substance cyclizine hydrochloride, which belongs to a group of medicines called antihistamines which can be used to help stop you feeling sick (nausea) or being sick (vomiting). Cyclizine Hydrochloride Tablets may be used by adults and children aged 6 years and over.	
Name: Cyproheptadine HCl	Metabolic agents
Description: Cyproheptadine is an antihistamine used to relieve allergy symptoms such as watery eyes, runny nose, itching eyes/nose, sneezing, hives, and itching. It works by blocking a certain natural substance (histamine) that your body makes during an allergic reaction.	
Name: Desloratadine	Metabolic agents
Description: Desloratadine is an antihistamine used to relieve allergy symptoms such as watery eyes, runny nose, itching eyes/nose, sneezing, hives, and itching. It works by blocking a certain natural substance (histamine) that your body makes during an allergic reaction.	
Name: Pyrilamine Maleate	Metabolic agents
Description: Pyrilamine is an antihistamine that reduces the effects of natural chemical histamine in the body. Acetaminophen, pamabrom, and pyrilamine is a combination medicine used to treat the symptoms of premenstrual syndrome (PMS), such as tension, bloating, water weight gain, headache, muscle pain, cramps, and irritability	
Name: Rabeprazole Sodium	Metabolic agents
Description: Aciphex (rabeprazole sodium) is a proton pump inhibitor (PPI) to reduce stomach acid and is used for the treatment of gastroesophageal reflux disease (GERD), duodenal ulcers, and used in combination with antibiotics to treat Helicobacter pylori (H. pylori) bacterial infections in the stomach.	
Name: Ranitidine Base/HCl	Metabolic agents
Description: Ranitidine is used to treat ulcers of the stomach and intestines and prevent them from coming back after they have healed. This medication is also used to treat certain stomach and throat (esophagus) problems (such as erosive esophagitis, gastroesophageal reflux disease-GERD, Zollinger-Ellison syndrome).	
Name: Glibenclamide	Metabolic agents
Description: Glibenclamide, also known as glyburide, is a medication used to treat diabetes mellitus type 2. It is recommended that it be taken together with diet and exercise. It may be used with other antidiabetic medication. It is not recommended for use by itself in diabetes mellitus type 1.	
Name: Gliclazide	Metabolic agents
Description: Gliclazide belongs to the class of medications known as oral hypoglycemics. It is used for the control of blood glucose in people with type 2 diabetes. It is used when diet, exercise, and weight reduction have not been found to control blood glucose well enough without medication.	

Name: Glimepiride
Metabolic agents

Description: Glimepiride is used with a proper diet and exercise program to control high blood sugar in people with type 2 diabetes. It may also be used with other diabetes medications. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Glipizide
Metabolic agents

Description: Glipizide is used with a proper diet and exercise program to control high blood sugar in people with type 2 diabetes. It may also be used with other diabetes medications. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Granisetron HCl
Metabolic agents

Description: This medication is used alone or with other medications to prevent nausea and vomiting caused by cancer drug treatment (chemotherapy). It is also used to prevent and treat nausea and vomiting after surgery in adults. Granisetron works by blocking one of the body's natural substances (serotonin) that can cause vomiting.

Name: Lansoprazole
Metabolic agents

Description: It relieves symptoms such as heartburn, difficulty swallowing, and persistent cough. This medication helps heal acid damage to the stomach and esophagus, helps prevent ulcers, and may help prevent cancer of the esophagus. Lansoprazole belongs to a class of drugs known as proton pump inhibitors (PPIs).

Name: Levocetirizine DiHCl
Metabolic agents

Description: Levocetirizine is an antihistamine used to relieve allergy symptoms such as watery eyes, runny nose, itching eyes/nose, and sneezing. It is also used to relieve itching and hives. It works by blocking a certain natural substance (histamine) that your body makes during an allergic reaction.

Name: Repaglinide
Metabolic agents

Description: Repaglinide is used alone or with other medications to control high blood sugar along with a proper diet and exercise program. It is used in people with type 2 diabetes. Controlling high blood sugar helps prevent kidney damage, blindness, nerve problems, loss of limbs, and sexual function problems.

Name: Rosiglitazone Maleate
Metabolic agents

Description: Avandia (rosiglitazone maleate) is an oral diabetes medicine that helps control blood sugar levels. Avandia is for people with type 2 (non-insulin-dependent) diabetes. Avandia is sometimes used in combination with insulin or other medications, but it is not for treating type 1 diabetes.

Name: Simvastatin
Metabolic agents

Description: Simvastatin is used along with a proper diet to help lower "bad" cholesterol and fats (such as LDL, triglycerides) and raise "good" cholesterol (HDL) in the blood. It belongs to a group of drugs known as "statins." It works by reducing the amount of cholesterol made by the liver.

Name: Omeprazole
Metabolic agents

Description: Omeprazole is used to treat certain stomach and esophagus problems (such as acid reflux, ulcers). It works by decreasing the amount of acid your stomach makes. It relieves symptoms such as heartburn, difficulty swallowing, and persistent cough.

Name: Ondansetron
Metabolic agents

Description: Ondansetron is a drug mainly used as an antiemetic. The drug is used in conjunction with chemotherapy and radiotherapy, or after surgery to prevent or treat nausea and vomiting.

Name: Ondansetron HCl

Metabolic agents

Description: This medication is used alone or with other medications to prevent nausea and vomiting caused by cancer drug treatment (chemotherapy) and radiation therapy. It is also used to prevent and treat nausea and vomiting after surgery. It works by blocking one of the body's natural substances (serotonin) that causes vomiting.

Name: Pantoprazole Sodium sterile/none- sterile

Metabolic agents

Description: Pantoprazole is used to treat certain stomach and esophagus problems (such as acid reflux). It works by decreasing the amount of acid your stomach makes. This medication relieves symptoms such as heartburn, difficulty swallowing, and persistent cough.

Name: Pheniramine Maleate

Metabolic agents

Description: Pantoprazole is used to treat certain stomach and esophagus problems (such as acid reflux). It works by decreasing the amount of acid your stomach makes. This medication relieves symptoms such as heartburn, difficulty swallowing, and persistent cough.

Name: Pioglitazone HCl

Metabolic agents

Description: Pioglitazone is a diabetes drug (thiazolidinedione-type, also called "glitazones") used along with a proper diet and exercise program to control high blood sugar in patients with type 2 diabetes. It works by helping to restore your body's proper response to insulin, thereby lowering your blood sugar.

Name: Promethazine HCl

Metabolic agents

Description: Promethazine is used to prevent and treat nausea and vomiting related to certain conditions (such as before/after surgery, motion sickness). It is also used to treat allergy symptoms such as rash, itching, and runny nose.

Name: Sucralfate

Metabolic agents

Description: This medication is used to treat and prevent ulcers in the intestines. Sucralfate forms a coating over ulcers, protecting the area from further injury. This helps ulcers heal more quickly.

Name: Terfenadine

Metabolic agents

Description: Terfenadine was withdrawn from the U.S. market in 1998. Terfenadine is an antihistamine. Antihistamines prevent sneezing, runny nose, itching and watering of the eyes, and other allergic symptoms. Terfenadine is used to treat allergies, hives (urticaria), and other allergic inflammatory conditions

Name: Trimethobenzamide

Metabolic agents

Description: Trimethobenzamide is used to treat nausea and vomiting that may occur after surgery or with a certain stomach/intestinal problem (gastroenteritis). Treating vomiting quickly can prevent a serious loss of body water (dehydration).

NSAID (Non-steroidal Anti-Inflammatory pharmaceuticals)

Name: Aceclofenac

Anti-Inflammatory pharmaceuticals

Description: Anti-inflammatory painkillers like aceclofenac are also called non-steroidal anti-inflammatory drugs (NSAIDs), or sometimes just 'anti-inflammatories'. Aceclofenac is prescribed for people with painful rheumatic conditions such as osteoarthritis, rheumatoid arthritis and ankylosing spondylitis

Name: Acetyl Salicylic Acid

Anti-Inflammatory pharmaceuticals

Description: Aspirin is used to reduce fever and relieve mild to moderate pain from conditions such as muscle aches, toothaches, common cold, and headaches. It may also be used to reduce pain and swelling in conditions such as arthritis. Aspirin is known as a salicylate and a nonsteroidal anti-inflammatory drug (NSAID).

Name: ASS (Acetylsalicylic Acid, Aspirin)

Anti-Inflammatory pharmaceuticals

Description: Aspirin, also known as acetylsalicylic acid (ASA), is a medication used to reduce pain, fever, or inflammation. Specific inflammatory conditions which aspirin is used to treat include Kawasaki disease, pericarditis, and rheumatic fever. Aspirin given shortly after a heart attack decreases the risk of death.

Name: Celecoxib

Anti-Inflammatory pharmaceuticals

Description: This medication is a nonsteroidal anti-inflammatory drug (NSAID), specifically a COX-2 inhibitor, which relieves pain and swelling (inflammation). It is used to treat arthritis, acute pain, and menstrual pain and discomfort.

Name: Diclofenac Diethylammonium

Anti-Inflammatory pharmaceuticals

Description: Diclofenac is a medicine that reduces inflammation and pain. It's used to treat aches and pains, as well as problems with joints, muscles and bones. These include: rheumatoid arthritis, osteoarthritis and gout.

Name: Diclofenac Potassium

Anti-Inflammatory pharmaceuticals

Description: Diclofenac is used to relieve pain and swelling (inflammation) from various mild to moderate painful conditions. It is used to treat muscle aches, backaches, dental pain, menstrual cramps, and sports injuries. It also reduces pain, swelling, and joint stiffness caused by arthritis.

Name: Diclofenac Sodium

Anti-Inflammatory pharmaceuticals

Description: Diclofenac is used to relieve pain, swelling (inflammation), and joint stiffness caused by arthritis. Reducing these symptoms helps you do more of your normal daily activities. This medication is known as a nonsteroidal anti-inflammatory drug (NSAID).

Name: Etodolac

Anti-Inflammatory pharmaceuticals

Description: Etodolac is used to relieve pain from various conditions. It also reduces pain, swelling, and joint stiffness from arthritis. This medication is known as a nonsteroidal anti-inflammatory drug (NSAID). It works by blocking your body's production of certain natural substances that cause inflammation.

Name: Fenopfen Calcium

Anti-Inflammatory pharmaceuticals

Description: Fenopfen is used to relieve mild to moderate pain from various conditions. It also reduces pain, swelling, and joint stiffness from arthritis. This medication is known as a nonsteroidal anti-inflammatory drug (NSAID).

Name: Ibuprofen

Anti-Inflammatory pharmaceuticals

Description: Ibuprofen is used to relieve pain from various conditions such as headache, dental pain, menstrual cramps, muscle aches, or arthritis. It is also used to reduce fever and to relieve minor aches and pain due to the common cold or flu. Ibuprofen is a nonsteroidal anti-inflammatory drug (NSAID).

Name: Valdecobix

Anti-Inflammatory pharmaceuticals

Description: Valdecobix is in a class of drugs called nonsteroidal anti-inflammatory drugs (NSAIDs). Valdecobix works by reducing substances in the body that cause inflammation, pain, and fever. Valdecobix is used to reduce pain, inflammation, and stiffness caused by osteoarthritis and adult rheumatoid arthritis

Name: Indomethacin

Anti-Inflammatory pharmaceuticals

Description: Indomethacin is used to relieve pain, swelling, and joint stiffness caused by arthritis, gout, bursitis, and tendonitis. Reducing these symptoms helps you do more of your normal daily activities. This medication is known as a nonsteroidal anti-inflammatory drug (NSAID).

Name: Ketoprofen
Anti-Inflammatory pharmaceuticals

Description: Ketoprofen is used to relieve pain from various conditions. It also reduces pain, swelling, and joint stiffness from arthritis. This medication is a nonsteroidal anti-inflammatory drug (NSAID). It works by blocking your body's production of certain natural substances that cause inflammation.

Name: Ketorolac Tromethamine
Anti-Inflammatory pharmaceuticals

Description: This medication is a nonsteroidal anti-inflammatory drug (NSAID). It works by blocking your body's production of certain natural substances that cause inflammation. This effect helps to decrease swelling, pain, or fever. Ketorolac should not be used for mild or long-term painful conditions (such as arthritis).

Name: Lornoxicam
Anti-Inflammatory pharmaceuticals

Description: Flexilor 8 Tablet is a pain relieving medicine. It is used for symptomatic treatment of acute mild to moderate pain and inflammation in patients of osteoarthritis and rheumatoid arthritis

Name: Mefenamic Acid
Anti-Inflammatory pharmaceuticals

Description: Mefenamic acid is used for the short-term treatment of mild to moderate pain from various conditions. It is also used to decrease pain and blood loss from menstrual periods. Mefenamic acid is known as a nonsteroidal anti-inflammatory drug (NSAID).

Name: Meloxicam
Anti-Inflammatory pharmaceuticals

Description: Meloxicam is used to treat arthritis. It reduces pain, swelling, and stiffness of the joints. Meloxicam is known as a nonsteroidal anti-inflammatory drug (NSAID). If you are treating a chronic condition such as arthritis, ask your doctor about non-drug treatments and/or using other medications to treat your pain.

Name: Methyl-Salicylat
Anti-Inflammatory pharmaceuticals

Description: This product is used to treat minor aches and pains of the muscles/joints (such as arthritis, backache, sprains). Menthol and methyl salicylate work by causing the skin to feel cool and then warm. These feelings on the skin distract you from feeling the aches/pains deeper in your muscles and joints.

Name: Nabumetone
Anti-Inflammatory pharmaceuticals

Description: Nabumetone is used to relieve pain, tenderness, swelling, and stiffness caused by osteoarthritis (arthritis caused by a breakdown of the lining of the joints) and rheumatoid arthritis (arthritis caused by swelling of the lining of the joints). Nabumetone is in a class of medications called NSAIDs.

Name: Naproxen
Anti-Inflammatory pharmaceuticals

Description: Naproxen is a medicine that reduces inflammation and pain in joints and muscles. It's used to treat diseases of joints, such as rheumatoid arthritis, osteoarthritis and gout. It's also used for period pain and muscle and bone disorders, such as back pain and sprains and strains.

Name: Naproxen Sodium
Anti-Inflammatory pharmaceuticals

Description: Naproxen is an analgesic, antipyretic and anti-inflammatory drug in the NSAID group, which is available in both non-prescription and prescription variants. The preparation is dosed twice daily, and is relatively long-acting compared to other drugs in the group

Name: Nimesulide
Anti-Inflammatory pharmaceuticals

Description: Nimesulide is a nonsteroidal anti-inflammatory drug (NSAID) with pain medication and fever reducing properties. Its approved indications are the treatment of acute pain, the symptomatic treatment of osteoarthritis, and primary dysmenorrhoea in adolescents and adults above 12 years old.

Name: Oxaprozin
Anti-Inflammatory pharmaceuticals

Description: Oxaprozin is used to treat arthritis. It reduces pain, swelling, and stiffness of the joints. Oxaprozin is known as a nonsteroidal anti-inflammatory drug (NSAID). If you are treating a chronic condition such as arthritis, ask your doctor about non-drug treatments and/or using other medications to treat your pain.

Name: Paracoxib Sodium
Anti-Inflammatory pharmaceuticals

Description: This medicine is used for the prevention and treatment of pain. It can be used to relieve pain and reduce inflammation (swelling and soreness) which may occur after surgery. Although Dynastat can relieve the symptoms of pain and inflammation, it will not cure your condition.

Name: Phenazone
Anti-Inflammatory pharmaceuticals

Description: Phenazone, known in the U.S. as antipyrine, is a pain reliever, and a fever reducer. It is combined in ear drops (otic drops) with benzocaine, a medication used to numb the ear. It is used to relieve ear pain caused by infections, and remove a build up of ear wax.

Name: Phenylbutazone
Anti-Inflammatory pharmaceuticals

Description: Phenylbutazone is a nonsteroidal anti-inflammatory drug (NSAID) effective in treating fever, pain, and inflammation in the body. As a group, NSAIDs are non-narcotic relievers of mild to moderate pain of many causes, including injury, menstrual cramps, arthritis and other musculoskeletal conditions.

Name: Piroxicam
Anti-Inflammatory pharmaceuticals

Description: Piroxicam is used to reduce pain, swelling, and joint stiffness from arthritis. Reducing these symptoms helps you do more of your normal daily activities. This medication is known as a nonsteroidal anti-inflammatory drug (NSAID).

Name: Propyphenazone
Anti-Inflammatory pharmaceuticals

Description: Propyphenazone is a derivative of phenazone with similar analgesic and antipyretic effects. It is known as isopropylantipyrine in Japan. It was patented in 1931. The drug is marketed as a combination of (Paracetamol-Caffeine-Propyphenazone) tablets in effective treatment for primary headache disorder.

Name: Salicylamide
Anti-Inflammatory pharmaceuticals

Description:

Name: Sodium Salicylate
Anti-Inflammatory pharmaceuticals

Description: Salicylamide (o-hydroxybenzamide or amide of salicyl) is a non-prescription drug with analgesic and antipyretic properties. Its medicinal uses are similar to those of aspirin. Salicylamide is used in combination with both aspirin and caffeine in the over-the-counter pain remedy PainAid.

Name: Tenoxicam
Anti-Inflammatory pharmaceuticals

Description: Tenoxicam is used to ease pain and reduce inflammation in rheumatic conditions, and also to treat painful conditions such as sprains and strains, and other muscle or joint injuries

Special use therapeutics

Name: Acetazolamid
Special use therapeutics

Description: Acetazolamid is used to prevent and reduce the symptoms of altitude sickness. This medication can decrease headache, tiredness, nausea, dizziness, and shortness of breath that can occur when you climb quickly to high altitudes (generally above 10,000 feet/3,048 meters).

Name: Adapalene
Special use therapeutics

Description: Adapalene is used to treat acne. It may decrease the number and severity of acne pimples and promote quick healing of pimples that do develop. Adapalene belongs to a class of medications called retinoids. It works by affecting the growth of cells and decreasing swelling and inflammation.

Name: Albuterol Base/Sulfate
Special use therapeutics

Description: Albuterol (also known as salbutamol) is used to treat wheezing and shortness of breath caused by breathing problems (such as asthma, chronic obstructive pulmonary disease). Albuterol belongs to a class of drugs known as bronchodilators.

Name: Alendronate Sodium
Special use therapeutics

Description: Alendronate is used to treat a certain type of bone disease called Paget's disease. This disease weakens and deforms bones. Alendronate works by slowing bone loss, helping to keep your bones strong and less likely to break. It also helps reduce bone pain from this disease.

Name: Aminophylline
Special use therapeutics

Description: Aminophylline is used to prevent and treat wheezing, shortness of breath, and difficulty breathing caused by asthma, chronic bronchitis, emphysema, and other lung diseases. It relaxes and opens air passages in the lungs, making it easier to breathe.

Name: Amiodarone HCl
Special use therapeutics

Description: This medication is used to treat certain types of serious (possibly fatal) irregular heartbeat (such as persistent ventricular fibrillation/tachycardia). It is used to restore normal heart rhythm and maintain a regular, steady heartbeat. Amiodarone is known as an anti-arrhythmic drug.

Name: Amlodipine Besylate
Special use therapeutics

Description: Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Amlodipine belongs to a class of drugs known as calcium channel blockers. It works by relaxing blood vessels so blood can flow more easily. Amlodipine is also used to prevent certain types of chest pain (angina).

Name: Amlodipine Maleate
Special use therapeutics

Description: Amlodipine is a medicine used to treat high blood pressure (hypertension). If you have high blood pressure, taking amlodipine helps prevent future heart disease, heart attacks and strokes. Amlodipine is also used to prevent chest pain caused by heart disease (angina).

Name: Atenolol
Special use therapeutics

Description: Atenolol belongs to a group of medicines called beta blockers. It's used to treat high blood pressure and irregular heartbeats (arrhythmia). It can also be used to prevent chest pain caused by angina. If you have high blood pressure, taking atenolol helps prevent future heart disease, heart attacks and strokes

Name: Balsalazide Bisodium Dihydrate
Special use therapeutics

Description: Balsalazide is used to treat a certain bowel disease (ulcerative colitis). It helps to reduce symptoms of ulcerative colitis such as diarrhea, rectal bleeding, and stomach pain. Balsalazide belongs to a class of drugs known as aminosalicylates. It works by decreasing swelling in the colon.

Name: Benazepril HCl
Special use therapeutics

Description: Benazepril is used to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Benazepril is an ACE inhibitor and works by relaxing blood vessels so that blood can flow more easily.

Name: Bendroflumethiazide
Special use therapeutics

Description: Bendroflumethiazide is a type of medicine called a diuretic. It's used to treat high blood pressure (hypertension) and the build-up of fluid in your body (oedema). Diuretics are sometimes called 'water pills' because they make you pee more. This helps get rid of extra fluid in your body.

Name: Bromhexine Hydrochloride
Special use therapeutics

Description: Bromhexine is used in a condition where there is a lot of thick phlegm in the airways. As a mucolytic, it helps to relieve productive cough by thinning the phlegm in the airways and facilitating the removal of the mucus.

Name: Budesonide
Special use therapeutics

Description: This medication is used to treat certain bowel conditions (such as Crohn's disease, ulcerative colitis). While budesonide does not cure these conditions, it may decrease symptoms such as pain and diarrhea. Budesonide is an anti-inflammatory drug (corticosteroid hormone).

Name: Calcium Carbonate, precipitated
Special use therapeutics

Description: Calcium is needed by the body for healthy bones, muscles, nervous system, and heart. Calcium carbonate also is used as an antacid to relieve heartburn, acid indigestion, and upset stomach. It is available with or without a prescription

Name: Carboplatin
Special use therapeutics

Description: Carboplatin is used to treat ovarian cancer. Carboplatin is also used for other types of cancer, including lung, head and neck, endometrial, esophageal, bladder, breast, and cervical; central nervous system or germ cell tumors; osteogenic sarcoma; and as preparation for a stem cell or bone marrow transplant.

Name: Carisoprodol
Special use therapeutics

Description: Carisoprodol is a muscle relaxer that blocks pain sensations between the nerves and the brain. Carisoprodol is used together with rest and physical therapy to treat skeletal muscle conditions such as pain or injury

Name: Carvedilol
Special use therapeutics

Description: Carvedilol is used to treat high blood pressure and heart failure. It is also used after a heart attack to improve the chance of survival if your heart is not pumping well. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems.

Name: Chlorthalidone
Special use therapeutics

Description: Chlorthalidone is used to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. It is also used to reduce extra salt and water in the body caused by conditions such as heart failure, liver disease, and kidney disease.

Name: Magnesium Trisilikate
Special use therapeutics

Description: This medication is used to treat the symptoms of too much stomach acid such as stomach upset, heartburn, and acid indigestion. Aluminum and magnesium antacids work quickly to lower the acid in the stomach. Liquid antacids usually work faster/better than tablets or capsules.

Name: Mannitol
Special use therapeutics

Description: Mannitol is a diuretic that is used to reduce swelling and pressure inside the eye or around the brain. Mannitol is also used to help your body produce more urine. mannitol is used in people with kidney failure, to remove excess water and toxins from the body

Name: Medroxyprogesterone
Special use therapeutics

Description: Medroxyprogesterone is a progestin (a form of progesterone), a female hormone that helps regulate ovulation (the release of an egg from an ovary) and menstrual periods. Medroxyprogesterone is used to treat conditions such as absent or irregular menstrual periods, or abnormal uterine bleeding

Name: Memantine HCl
Special use therapeutics

Description: Memantine is used to treat moderate to severe confusion (dementia) related to Alzheimer's disease. It does not cure Alzheimer's disease, but it may improve memory, awareness, and the ability to perform daily functions.

Name: Methazolamide
Special use therapeutics

Description: This medication is used to treat high pressure inside the eye due to certain types of glaucoma. Lowering high pressure inside the eye helps to prevent blindness, vision loss, and nerve damage. Methazolamide belongs to a class of drugs known as carbonic anhydrase inhibitors.

Name: Methocarbamol
Special use therapeutics

Description: Methocarbamol is used to treat muscle spasms/pain. It is usually used along with rest, physical therapy, and other treatment. It works by helping to relax the muscles.

Name: Methyldopa
Special use therapeutics

Description: This medication is used alone or with other medications to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Methyldopa works by relaxing blood vessels so blood can flow more easily.

Name: Metoclopramide HCl
Special use therapeutics

Description: Metoclopramide is an anti-sickness medicine (known as an antiemetic). It's used to help stop you feeling or being sick (nausea or vomiting) including: after radiotherapy or chemotherapy (treatment for cancer) sickness you may get with a migraine.

Name: Chlorzoxazone
Special use therapeutics

Description: Chlorzoxazone is used to treat muscle spasms/pain. It is usually used along with rest, physical therapy, and other treatment. It works by helping to relax the muscles.

Name: Cilostazol
Special use therapeutics

Description: Cilostazol (Pletal) is the first approved drug for claudicatio intermittens (window titer disease) in Sweden. The indication is to extend the maximum and pain-free walk distance for patients who do not suffer from pain at rest and who do not show signs of peripheral tissue necrosis

Name: Cimetidine Base/HCl
Special use therapeutics

Description: Cimetidine belongs to a class of drugs commonly called H2 blockers. It works by reducing the amount of acid in your stomach. This medication is also available without a prescription. It is used to treat occasional heartburn caused by too much acid in the stomach (also called acid indigestion or sour stomach).

Name: Cisplatin
Special use therapeutics

Description: Cisplatin, cisplatinum, or cis-diamminedichloroplatinum (II), is a well-known chemotherapeutic drug. It has been used for treatment of numerous human cancers including bladder, head and neck, lung, ovarian, and testicular cancers

Name: Cladribine
Special use therapeutics

Description: Cladribine is used to treat hairy cell leukemia (cancer of a certain type of white blood cell). Cladribine is in a class of medications known as purine analogs. It works by stopping or slowing the growth of cancer cells.

Name: Clonidine HCl
Special use therapeutics

Description: This medication is used alone or with other medications to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Clonidine belongs to a class of drugs (central alpha agonists) that act in the brain to lower blood pressure.

Name: Clopidogrel Bisulphate
Special use therapeutics

Description: Clopidogrel, sold under the trade name Plavix among other is an antiplatelet medication used to reduce the risk of heart disease and stroke in those at high risk. It is also used together with aspirin in heart attacks and following the placement of a coronary artery stent (dual antiplatelet therapy).

Name: Cyclosporine A
Special use therapeutics

Description: Cyclosporine is used to prevent organ rejection in people who have received a liver, kidney, or heart transplant. It is usually taken along with other medications to allow your new organ to function normally. Cyclosporine belongs to a class of drugs known as immunosuppressants.

Name: Cyproterone acetate
Special use therapeutics

Description: Antiandrogens such as cyproterone block the effect of the hormone called testosterone. This causes a reduction in the production of testosterone in the testicles, which prostate cancer cells require for growth.

Name: Cytarabine
Special use therapeutics

Description: Cytarabine is used alone or with other chemotherapy drugs to treat certain types of leukemia (cancer of the white blood cells), including acute myeloid leukemia (AML), acute lymphocytic leukemia (ALL), and chronic myelogenous leukemia (CML).

Name: Dacarbazine
Special use therapeutics

Description: Dacarbazine is used to treat melanoma (a type of skin cancer) that has spread to other parts of your body. Dacarbazine is also used in combination with other medications to treat Hodgkin's lymphoma (Hodgkin's disease; a type of cancer that begins in a type of white blood cells that normally fights infection).

Name: Dextromethorphan Base/HBr
Special use therapeutics

Description: Promethazine HCl and Dextromethorphan Hydrobromide Syrup is a combination of an antihistamine and a cough suppressant used to treat cough, itching, runny nose, sneezing, and itchy or watery eyes caused by colds or allergies. Promethazine HCl and dextromethorphan hydrobromide syrup is available in generic form.

Name: Diltiazem HCl
Special use therapeutics

Description: Diltiazem is used to prevent chest pain (angina). It may help to increase your ability to exercise and decrease how often you may get angina attacks. Diltiazem is called a calcium channel blocker. It works by relaxing blood vessels in the body and heart and lowers the heart rate.

Name: Doxazosin Mesylate
Special use therapeutics

Description: Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. This medication works by relaxing blood vessels so blood can flow more easily. Doxazosin is also used in men to treat the symptoms of an enlarged prostate (benign prostatic hyperplasia-BPH)

Name: Enalapril Maleate
Special use therapeutics

Description: Enalapril is used to treat high blood pressure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. It is also used to treat heart failure and to help prevent people with a certain heart problem (left ventricular dysfunction) from developing heart failure.

Name: Enalaprilat
Special use therapeutics

Description: Enalapril oral tablet is available as both a generic and brand-name drug. Brand name: Vasotec. Enalapril comes as an oral tablet and an oral solution. Enalapril oral tablet is used to treat high blood pressure, heart failure, and asymptomatic left ventricular dysfunction.

Name: Esomeprazole Magnesium Base/Trihydrate
Special use therapeutics

Description: Esomeprazole is used to treat certain stomach and esophagus problems (such as acid reflux, ulcers). It works by decreasing the amount of acid your stomach makes. It relieves symptoms such as heartburn, difficulty swallowing, and persistent cough.

Name: Etidronate Disodium
Special use therapeutics

Description: Etidronate is used to treat a certain type of bone disease called Paget's disease. This disease weakens and deforms bones. Etidronate works by slowing bone loss, helping to keep your bones strong and less likely to break. It also helps reduce bone pain from this disease.

Name: Etoposide
Special use therapeutics

Description: Etoposide is used in combination with other medications to treat a certain type of lung cancer (small cell lung cancer; SCLC). Etoposide is in a class of medications known as podophyllotoxin derivatives. It works by slowing or stopping the growth of cancer cells in your body.

Name: Mitoxantrone HCl
Special use therapeutics

Description: Mitoxantrone is used to treat leukemia and other cancers. It is also used to treat multiple sclerosis. It belongs to a class of drugs known as anthracenediones and works by slowing or stopping the growth of certain cells (including cancer cells and cells that affect the body's natural defenses).

Name: Naratriptan
Special use therapeutics

Description: Naratriptan is a headache medicine that narrows blood vessels around the brain. Naratriptan also reduces substances in the body that can trigger headache pain, sensitivity to light and sound, and other migraine symptoms. Naratriptan is used to treat migraine headaches

Name: Nifedipine
Special use therapeutics

Description: This medication is used to prevent certain types of chest pain (angina). It may allow you to exercise more and decrease the frequency of angina attacks. Nifedipine belongs to a class of medications known as calcium channel blockers. It works by relaxing blood vessels so blood can flow more easily.

Name: Norepinephrine Bitartrate
Special use therapeutics
Description:
Name: Oxaliplatin
Special use therapeutics
Description: It is used to treat life-threatening low blood pressure (hypotension) that can occur with certain medical conditions or surgical procedures. Norepinephrine is often used during CPR (cardio-pulmonary resuscitation)

Name: Paclitaxel
Special use therapeutics
Description: Taxol. Paclitaxel is used to treat breast cancer, ovarian cancer, and lung cancer. It is also used to treat AIDS-related Kaposi's sarcoma. Paclitaxel may also be used for purposes not listed in this medication guide.

Name: Pentoxifylline
Special use therapeutics
Description: This medication is used to improve the symptoms of a certain blood flow problem in the legs/arms (intermittent claudication due to occlusive artery disease). Pentoxifylline can decrease the muscle aching/pain/cramps during exercise, including walking, that occur with intermittent claudication.

Name: Perindopril Erbumine
Special use therapeutics
Description: Perindopril is used to treat high blood pressure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. This medication is also used to prevent heart attacks in people with a certain type of heart disease (stable coronary artery disease)

Name: Felodipine
Special use therapeutics
Description: Felodipine is used to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Felodipine is known as a calcium channel blocker. By blocking calcium, this medication relaxes and widens blood vessels so blood can flow more easily.

Name: Fluconazole
Special use therapeutics
Description: Fluconazole is used to treat vaginal yeast infections. It works by stopping the growth of common types of vaginal yeast (fungus). This medication belongs to a class of drugs called azole antifungals.

Name: Flunarizine HCl
Special use therapeutics
Description: Flunarizine to prevent migraine. Flunarizine has been used in medical practice for over 25 years. It was initially introduced as a medicine to improve blood flow and is a medicine known as a calcium channel blocker. It has been mainly used in the treatment of dizziness, vertigo and prevention of migraine.

Name: Flutamide
Special use therapeutics
Description: This medication is used to treat men with prostate cancer, and is used with other medications and sometimes with radiation treatments. Flutamide belongs to a class of drugs known as anti-androgens (anti-testosterone). Testosterone, a natural hormone, helps prostate cancer to grow and spread.

Name: Fosinopril Sodium
Special use therapeutics
Description: Fosinopril is a phosphinic acid-containing ester prodrug that belongs to the angiotensin-converting enzyme (ACE) inhibitor class of medications. It is rapidly hydrolyzed to fosinoprilat, its principle active metabolite. Fosinoprilat inhibits ACE, the enzyme responsible for the conversion of angiotensin I (ATI) to angiotensin II (ATII). ATII regulates blood pressure and is a key component of the renin-angiotensin-aldosterone system (RAAS). Fosinopril may be used to treat mild to moderate hypertension, as an adjunct in the treatment of congestive heart failure, and to slow the rate of progression of renal disease in hypertensive individuals with diabetes mellitus and microalbuminuria or overt nephropathy.

Name: Furosemide
Special use therapeutics

Description: Furosemide is a type of medicine called a diuretic. It's used to treat high blood pressure, heart failure and oedema (a build up of fluid in the body). It's also sometimes used to help you pee when your kidneys aren't working properly. Diuretics are sometimes called "water pills/tablets" because they make you pee more.

Name: Griseofulvin
Special use therapeutics

Description: Griseofulvin. Griseofulvin is an antifungal medication used to treat a number of types of dermatophytoses (ringworm). This includes fungal infections of the nails and scalp, as well as the skin when antifungal creams have not worked.

Name: Guaiphenesin
Special use therapeutics

Description: Guaifenesin is used to treat coughs and congestion caused by the common cold, bronchitis, and other breathing illnesses. This product is usually not used for ongoing cough from smoking or long-term breathing problems (such as chronic bronchitis, emphysema) unless directed by your doctor. Guaifenesin is an expectorant.

Name: Heparin Sodium
Special use therapeutics

Description: Heparin is used to prevent or treat certain blood vessel, heart, and lung conditions. Heparin is also used to prevent blood clotting during open-heart surgery, bypass surgery, kidney dialysis, and blood transfusions.

Name: Hydralazine
Special use therapeutics

Description: Hydralazine is used with or without other medications to treat high blood pressure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Hydralazine is called a vasodilator. It works by relaxing blood vessels so blood can flow through the body more easily.

Name: Hydrochlorothiazide
Special use therapeutics

Description: Hydrochlorothiazide is used to treat edema (fluid retention; excess fluid held in body tissues) caused by various medical problems, including heart, kidney, and liver disease and to treat edema caused by using certain medications including estrogen and corticosteroids.

Name: Ifosfamide
Special use therapeutics

Description: Ifosfamide is used in combination with other medications to treat cancer of the testicles that has not improved or that has worsened after treatment with other medications or radiation therapy. Ifosfamide is in a class of medications called alkylating agents.

Name: Irbesartan
Special use therapeutics

Description: Irbesartan is used to treat high blood pressure (hypertension) and to help protect the kidneys from damage due to diabetes. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. Irbesartan belongs to a class of drugs called angiotensin receptor blockers (ARBs).

Name: Isotretinoin
Special use therapeutics

Description: This medication is used to treat severe cystic acne (also known as nodular acne) that has not responded to other treatment (e.g., benzoyl peroxide or clindamycin applied to the skin or tetracycline or minocycline taken by mouth). It belongs to a class of drugs known as retinoids.

Name: Itraconazole
Special use therapeutics

Description: Itraconazole is an antifungal medication that is used in adults to treat infections caused by fungus. This includes infections in any part of the body including the lungs, mouth or throat, toenails, or fingernails. Some brands of itraconazole are not for use in treating fungal infections of the fingernails or toenails

Name: Ketoconazole
Special use therapeutics

Description: Ketoconazole is used to treat skin infections such as athlete's foot, jock itch, ringworm, and certain kinds of dandruff. This medication is also used to treat a skin condition known as pityriasis (tinea versicolor), a fungal infection that causes a lightening or darkening of the skin of the neck, chest, arms, or legs

Name: Ketotifen Fumarate
Special use therapeutics

Description: Itraconazole tablets and capsules are used to treat fungal infections of the toenails. Itraconazole oral solution (liquid) is used to treat yeast infections of the mouth and throat or of the esophagus (tube that connects the throat to the stomach). Itraconazole is in a class of antifungals called triazoles.

Name: Labetalol HCl
Special use therapeutics

Description: Labetalol is used with or without other medications to treat high blood pressure (hypertension). Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. This medication is both an alpha blocker and beta blocker.

Name: Lisinopril
Special use therapeutics

Description: Lisinopril is used to treat high blood pressure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. It is also used to treat heart failure and to improve survival after a heart attack. Lisinopril belongs to a class of drugs known as ACE inhibitors.

Name: Losartan Potassium
Special use therapeutics

Description: A lower blood pressure will increase the supply of the blood and oxygen to the heart. Losartan is also used to decrease the risk of stroke in patients with high blood pressure and enlargement of the heart. It is also used to treat kidney problems in patients with type 2 diabetes and a history of hypertension

Name: Propranolol HCl
Special use therapeutics

Description: This medication is a beta blocker used to treat high blood pressure, irregular heartbeats, shaking (tremors), and other conditions. It is used after a heart attack to improve the chance of survival. It is also used to prevent migraine headaches and chest pain (angina).

Name: Propranolol Hydrochloride
Special use therapeutics

Description: Propranolol is a beta-blocker. Beta-blockers affect the heart and circulation (blood flow through arteries and veins). Propranolol is used to treat tremors, angina (chest pain), hypertension (high blood pressure), heart rhythm disorders, and other heart or circulatory conditions.

Name: Quinapril HCl
Special use therapeutics

Description: Quinapril is used alone or together with other medicines to treat high blood pressure (hypertension). High blood pressure adds to the workload of the heart and arteries. If it continues for a long time, the heart and arteries may not function properly

Name: Raloxifene HCl
Special use therapeutics

Description: Raloxifene is used by women to prevent and treat bone loss (osteoporosis) after menopause. It slows down bone loss and helps to keep bones strong, making them less likely to break. Raloxifene may also lower the chance of getting a certain type of breast cancer (invasive breast cancer) after menopause.

Name: Ramipril
Special use therapeutics

Description: Ramipril (Altace) is an ACE inhibitor. ACE stands for angiotensin converting enzyme. Ramipril is used to treat high blood pressure (hypertension) or congestive heart failure, and to improve survival after a heart attack. Ramipril may also be used for purposes not listed in this medication guide

Name: Ranitidine HCl
Special use therapeutics

Description: Ranitidine is used to treat ulcers of the stomach and intestines and prevent them from coming back after they have healed. This medication is also used to treat certain stomach and throat (esophagus) problems (such as erosive esophagitis, gastroesophageal reflux disease-GERD, Zollinger-Ellison syndrome).

Name: Sotalol HCl
Special use therapeutics

Description: Sotalol is used to help keep the heart beating normally in people with certain heart rhythm disorders, such as atrial fibrillation, atrial flutter, ventricular tachycardia, and ventricular fibrillation. Sotalol may also be used for purposes

Name: Metoprolol Succinate
Special use therapeutics

Description: Metoprolol Succinate ER is a beta-blocker that affects the heart and circulation (blood flow through arteries and veins). Metoprolol Succinate ER is used to treat angina (chest pain) and hypertension (high blood pressure). It is also used to lower your risk of death or needing to be hospitalized for heart failure.

Name: Mitomycin C
Special use therapeutics

Description: Mitomycin is a cancer medicine that interferes with the growth and spread of cancer cells in the body. Mitomycin is used in combination with other cancer medications to treat cancer of the stomach and pancreas. Mitomycin treats only the symptoms of stomach or pancreatic cancer but does not treat the cancer itself.

Name: Tamoxifen Citrate
Special use therapeutics

Description: Tamoxifen is used to treat breast cancer. It is also used to reduce the chances of breast cancer in high-risk patients. This medication can block the growth of breast cancer. It works by interfering with the effects of estrogen in the breast tissue.

Name: Tamsulosin
Special use therapeutics

Description: alpha blocker Tamsulosin against enlarged prostate Tamsulosin is a new drug for the symptoms of enlarged prostate. In clinical studies, the drug has shown lesser side effects on blood pressure than other alpha blockers.

Name: Temozolomide
Special use therapeutics

Description: This medication is used to treat certain types of brain cancer. Temozolomide belongs to a class of drugs known as alkylating agents. It works by slowing or stopping the growth of cancer cells.

Name: Terazosin HCl Dihydrate
Special use therapeutics

Description: Terazosin is used to treat hypertension (high blood pressure), or to improve urination in men with benign prostatic hyperplasia (enlarged prostate). Terazosin may also be used for other purposes not listed in this medication guide

Name: Terbinafine DiHCl
Special use therapeutics

Description: Terbinafine is an antifungal medication that fights infections caused by fungus. Terbinafine tablets are used to treat infections caused by fungus that affect the fingernails or toenails. Terbinafine oral granules are used to treat a fungal infection of scalp hair follicles in children who are at least 4 years old.

Name: Pindolol
Special use therapeutics

Description: Pindolol is used to treat high blood pressure. Pindolol is in a class of medications called beta blockers. It works by relaxing blood vessels and slowing heart rate to improve blood flow and decrease blood pressure.

Name: Ticlopidine HCl
Special use therapeutics

Description: Ticlopidine is used to prevent blood clots after a recent heart attack or stroke, and in people who have had a stent placed in the arteries that supply blood to the heart. Ticlopidine may also be used for other purposes not listed in this medication guide.

Name: Tizanidine HCl
Special use therapeutics

Description: Tizanidine is a short-acting medication that should be taken only for daily activities that require relief from muscle spasticity. ... Cold or allergy medicine, narcotic pain medicine, sleeping pills, other muscle relaxers, and medicine for seizures, depression or anxiety can add to sleepiness caused by tizanidine.

Name: Tolnaftate
Special use therapeutics

Description: Tolnaftate stops the growth of fungi that cause skin infections, including athlete's foot, jock itch, and ringworm. This medication is sometimes prescribed for other uses; ask your doctor or pharmacist for more information.

Name: Topotecan
Special use therapeutics

Description: This medicine is used to treat cancer of the ovaries when other treatments have failed. Topotecan may also be used in certain types of lung cancer (small cell lung cancer).

Name: Torsemide
Special use therapeutics

Description: Torsemide is used to treat edema (fluid retention; excess fluid held in body tissues) caused by various medical problems, including heart, kidney, or liver disease. Torsemide is in a class of medications called diuretics ('water pills').

Name: Spironolactone
Special use therapeutics

Description: Spironolactone is used primarily to treat heart failure, edematous conditions such as nephrotic syndrome or ascites in people with liver disease, essential hypertension, low blood levels of potassium, secondary hyperaldosteronism (such as occurs with liver cirrhosis), and Conn's syndrome (primary hyperaldosteronism).

Name: Sumatriptan Succinate
Special use therapeutics

Description: Sumatriptan is used to treat migraines. It helps to relieve headache, pain, and other migraine symptoms (including nausea, vomiting, sensitivity to light/sound). Prompt treatment helps you return to your normal routine and may decrease your need for other pain medications.

Name: Vincristine
Special use therapeutics

Description: Cancers treated with Vincristine include: acute leukemia, Hodgkin's and non-Hodgkin's lymphoma, neuroblastoma, rhabdomyosarcoma, Ewing's sarcoma, Wilms' tumor, multiple myeloma, chronic leukemias, thyroid cancer, brain tumors.

Name: Vinorelbine Bitartrate
Special use therapeutics

Description: Vinorelbine (NVB), sold under the brand name Navelbine among others, is a chemotherapy medication used to treat a number of types of cancer. This includes breast cancer and non-small cell lung cancer. Vinorelbine was approved for medical use in the United States in 1994. It is on the World Health Organization's List of Essential Medicines, the safest and most effective medicines needed in a health system.

Name: Warfarin
Special use therapeutics

Description: Warfarin is used to treat and prevent blood clots that might result in heart attack, stroke, or death. It's also used for blood clots in atrial fibrillation, heart valve replacement, venous thrombosis, and pulmonary embolism.

Name: Trimetazidine Di HCl
Special use therapeutics

Description: Trimetazidine is an anti-ischemic (anti-anginal) metabolic agent, which improves myocardial glucose utilization through inhibition of fatty acid metabolism, also known as fatty acid oxidation inhibitor.

Name: Theophylline

Special use therapeutics

Description: Theophylline is used to prevent and treat wheezing, shortness of breath, and chest tightness caused by asthma, chronic bronchitis, emphysema, and other lung diseases. It relaxes and opens air passages in the lungs, making it easier to breathe.

PHARMACEUTICAL INDUSTRIES

Packaging details:

Fibre drums are suitable for transporting and storing bulk pharmaceutical powders tablets, capsules and active ingredients. Weight to be Packed 25 Kg. to 100 Kg.

Scangate Pharmacy Group: We develop Private Labels or Private Brands for third parties in API and OTC pharmaceutical products and Dietary Supplements. Our presentations come in soft capsules, hard capsules, tablets, creams, powders and effervescent tablets. We guarantee the quality of our products during the entire process, until delivering it complete with its designs, accompanied by the respective certificate of analysis to guarantee the quality of the same. We deliver the products with their brands in Pet containers, blister, collapsible tubes, according to the marketing needs. If you are already an esteemed client or an illustrious visitor, we invite you to gain a better knowledge of our services.
